[Factoring Polynomials \(Methods\) | How to Factorise Polynomial?](#)

FACTORING POLYNOMIALS 1) First determine if a common monomial factor (Greatest Common Factor) exists. Factor trees may be used to find the GCF of difficult numbers. Be aware of opposites: Ex. (a-b) and (b-a) These may become the same by factoring -1 from one of them. 2) If the problem to be factored is a binomial, see if it fits one of the following situations. A. Difference of two squares: B ...

[Factoring Polynomials Worksheet with Answers Algebra 2](#)

In this section we look at factoring polynomials a topic that will appear in pretty much every chapter in this course and so is vital that you understand it. We will discuss factoring out the greatest common factor, factoring by grouping, factoring quadratics and factoring polynomials with degree greater than 2.

Step 2: If the polynomial is a binomial, check to see if it is the difference of squares, the difference of cubes, or the sum of cubes. If the polynomial is a trinomial, check to see if it is a perfect square trinomial. If it is not, then try factoring using the AC Method. If the polynomial has more than three terms, try to factor by grouping.
